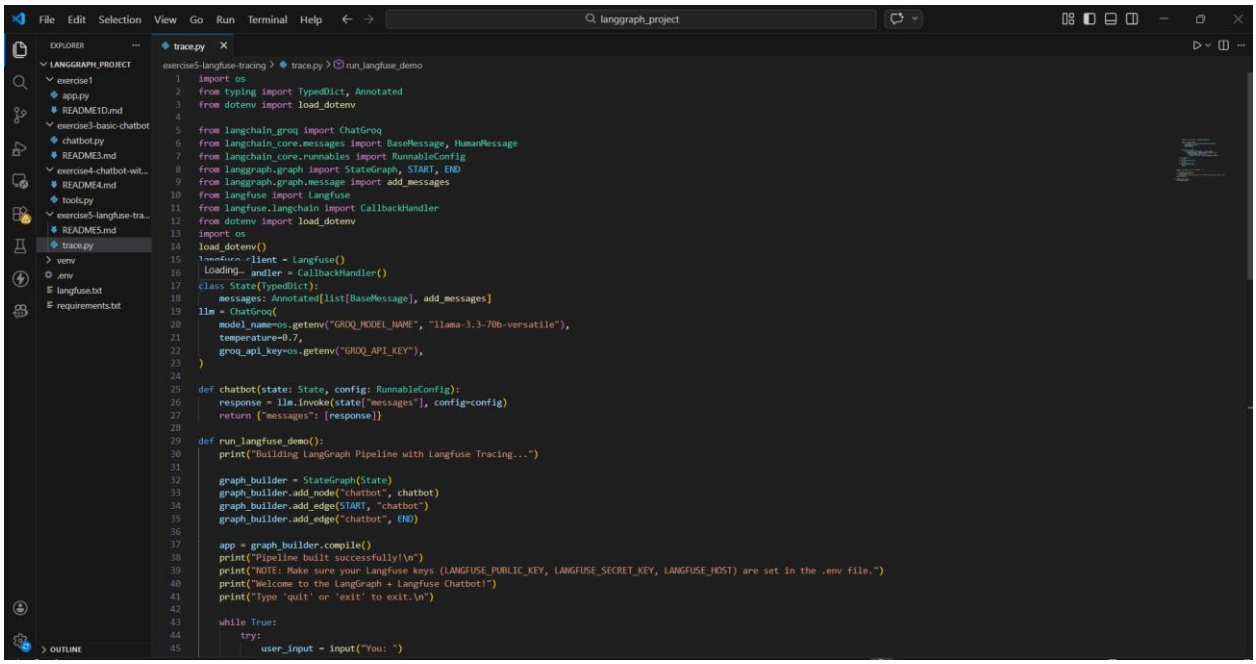
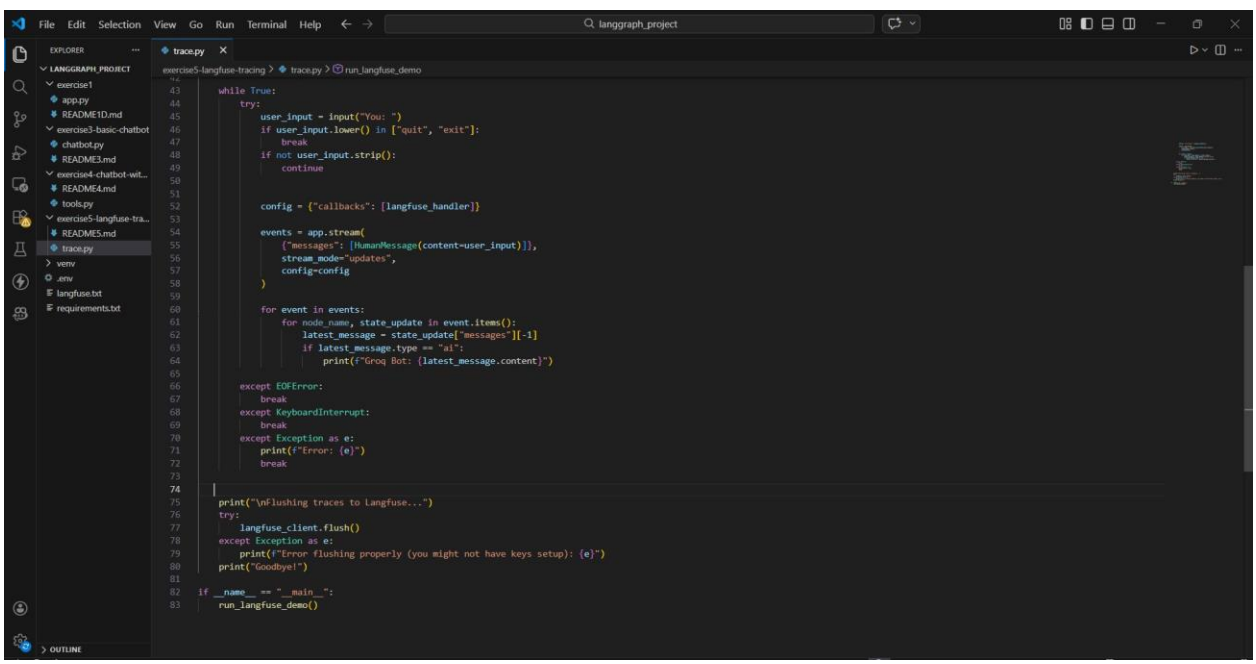
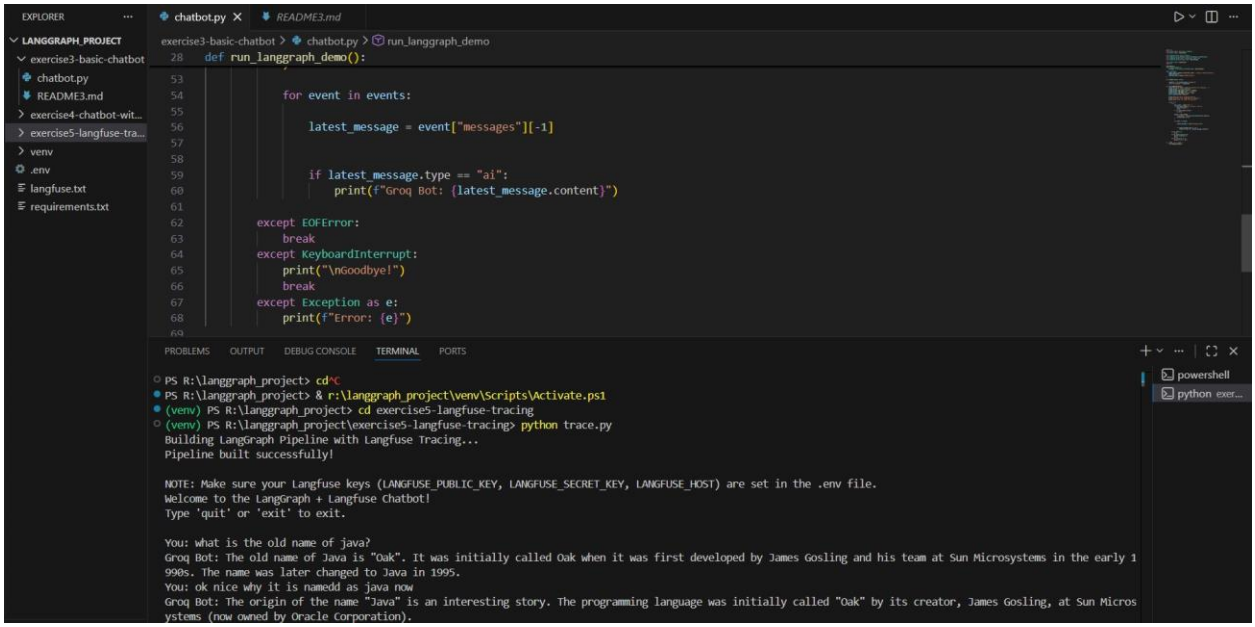
Exercise 5

LangGraph Chatbot with Langfuse Monitoring

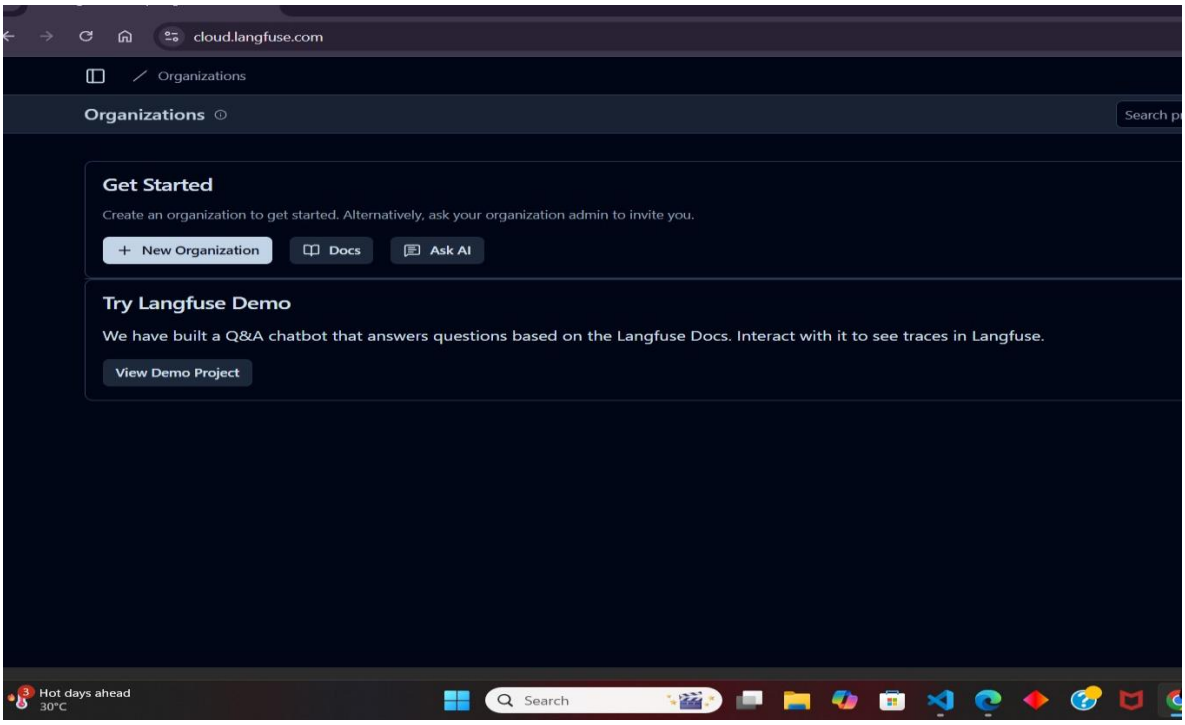






Langfuse Organization Dashboard

This screen shows the created organization and project used for monitoring the chatbot.



Langfuse Project Dashboard

The project dashboard shows information about traces, model cost, and token usage.

Key observations:

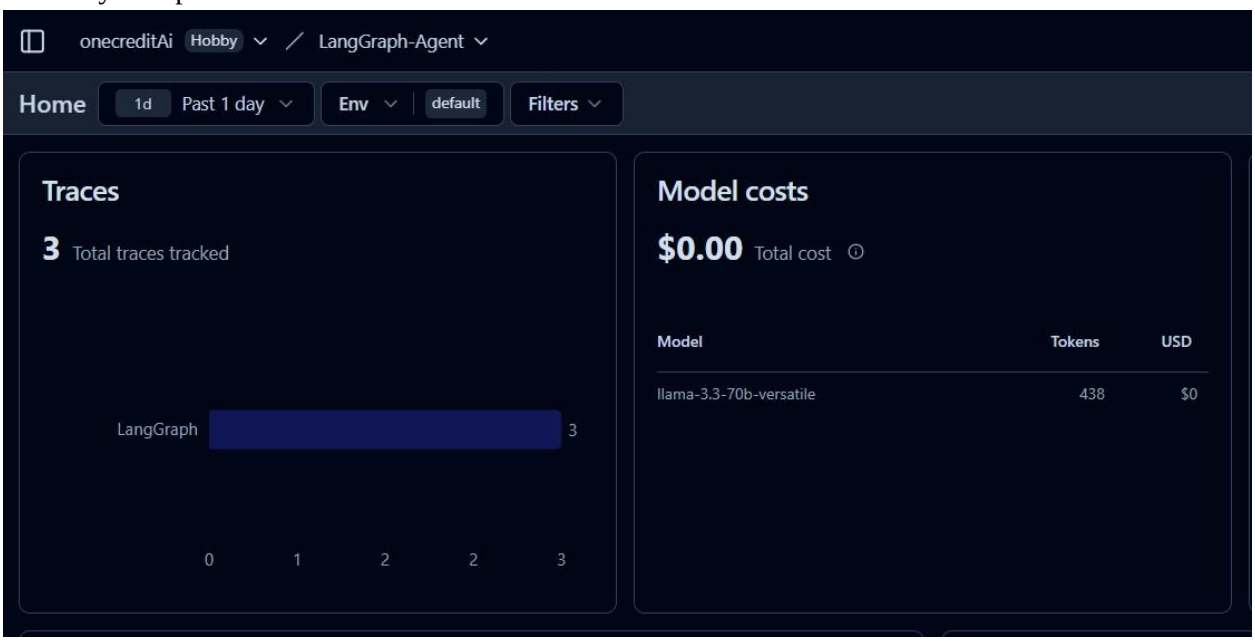
- Total traces tracked: 3
- Model used: llama-3.3-70b-versatile
- Token usage recorded
- Cost monitoring available

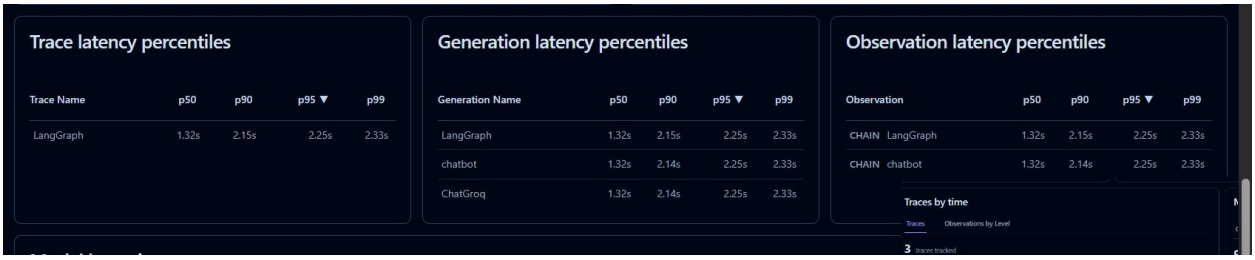
Trace Analytics

The trace analytics section shows the number of chatbot executions over time.

The graph displays:

- Trace count
- Execution timestamps
- System performance





Key Features Demonstrated

This exercise demonstrates:

- LLM tracing and observability
- AI workflow monitoring
- Performance analytics
- Token usage tracking

Monitoring tools like Langfuse are important when deploying production AI systems.
